

CONTINUOUS FIBREGLASS RODS

Continuous Fibreglass Rods, also known as Cobras or Duct Rods, are used in pipe and duct laying operations to assist with the installation of draw ropes, cables and winch wires. They can also be used as part of a CCTV or pipe cleaning system.

Pipe Equipment supply a range of high quality fibreglass rodding systems. They consist of flexible fibreglass rod mounted in a robust steel frame which can easily be handled by one person.

The fibreglass rods are manufactured from a number of fine longitudinal fibreglass strands which are then circumferentially wrapped with more fibreglass strands before being finally given a wear resistant polyester coating. It is this combination which gives our rods their high tensile strength coupled with the right amount of flexibility and toughness.

They are available in diameters 4.5mm, 6.7mm, 9mm, 11mm, and 14mm. Virtually any length can be supplied but standard lengths are shown below.

All rods are supplied with bonded on brass end fittings onto which is screwed a smooth profile guiding/towing tip.

The steel frames are zinc plated and, for the 11mm and 14mm rod, are fitted with two large wheels for ease of handling. All frames have a revolving inner cage from which the rod is dispensed. The cage is fitted with an adjustable brake to hold it in position either during usage or when not in use.

Rod Dia. (mm)	Standard Length (m)
4.5	40, 50, 60
6.7	40, 50, 60, 80, 100
9	60, 80, 100, 120, 150
11	100, 120, 150, 200, 250, 300
14	100, 120, 150, 200, 250, 300, 350, 400

MAJOR FEATURES

- Strong flexible rod
- Robust corrosion resistant frame fitted with an adjustable brake
- Replacement rods available
- Compact size
- Comprehensive range of accessories

Accessories such as flexible leaders, cleaning brushes and repair kits are also available. Further details upon request.

The company follow a policy of continuous product development and as such reserves the right to make alterations to equipment and techniques without prior notice.
