

LONGITUDINAL PIPE CUTTER

This lightweight pneumatically powered cutter has been specifically designed by Gaz de France to quickly and safely cut longitudinal slots in most pipe materials in the size range 80mm to 1000mm (3" to 36"). Thereby allowing a window to be cut from the pipe wall to gain access to a previously inserted pipe.

The cutter cuts a slot up to 500mm long and 20mm deep in Steel, Ductile Iron, Cast Iron, PVC, and ABS. One pass (up to 9mm deep depending on the material) takes less than 2 minutes.

The depth of cut can be very accurately controlled to avoid the possibility of damaging an inserted pipe – particularly important in the case of close fit linings.

It is supplied complete with an air filter/lubricator – which is housed in a separate strong plastic case. The complete assembly is supplied in a lightweight aluminium box. The air consumption is 20 litres/sec (42 cfm) at pressures up to 7 bar - allowing it to be powered from a standard on board, or single tool, compressor.

Both Hire and Contract Service options are available with this equipment.

For details on window cutting please refer to our **Window Cutter** technical sheet and, for cutting non-inserted pipes, see our **Pneumatic Hacksaw** sheet.

The company follow a policy of continuous product development and as such reserves the right to make alterations to equipment and techniques without prior notice.
