

PIPE SUPPORT ROLLERS

The Pipe Equipment Pipe Support Rollers have been specially designed to ease the problems of handling plastic pipes during jointing and installation. They greatly reduce the chances of pipe damage as a result of the pipe string being trailed along the ground and keep pipe drag to a minimum.

Pipe Support Rollers are available as 'Free Standing' or 'In Trench'.

FREE STANDING ROLLER

The Free Standing Roller comprises of fixed height 'Vee' formation of two rubber covered rollers mounted in a robust powder coated steel frame.

Three sizes are currently available – Standard, Medium and Large.

◀ STANDARD DIAMETER

The Standard Diameter Roller is suitable for use with all plastic pipes from 63mm to 355mm.

(Max load 200kg)

MEDIUM DIAMETER ▲

The Medium Diameter Roller is suitable for plastic pipes in the size range 250mm to 630mm.

(Max load 1000kg)

LARGE DIAMETER ►

The Large Diameter Roller, which has an adjustable frame, is suitable for pipes in the size range 500mm to 1200mm.

(Max load 1000kg)

◀ IN-TRENCH ROLLER

Utilising the same design of 'Vee' formation rubber coated rollers as the Free Standing Roller, the In-Trench Roller is mounted on a trench brace that is adjustable from 0.5 metre to 0.9 metre. Extensions are available to accommodate wider excavations. The In-Trench Roller can be positioned at any angle or point on the brace to enable the pipe to be guided in a trench for all insertion techniques.

The In-Trench Roller is available to suit pipes in the size range 63mm to 355mm.

MAJOR FEATURES

- Extremely robust
- Free standing or In-trench options
- Rubber coated rollers minimise pipe damage
- Differing trench widths accommodated
- Multi positional
- Three sizes available to suit pipes from 63mm to 1200mm

The company follows a policy of continuous product development and as such reserves the right to make alterations to equipment and techniques without prior notice.
