

SWAGELINING

The Swagelining system is a close fit relining system (developed by British Gas and now licensed by Swagelining Ltd) which uses PE pipe with an outside diameter slightly larger than the inside diameter of the pipe to be lined.

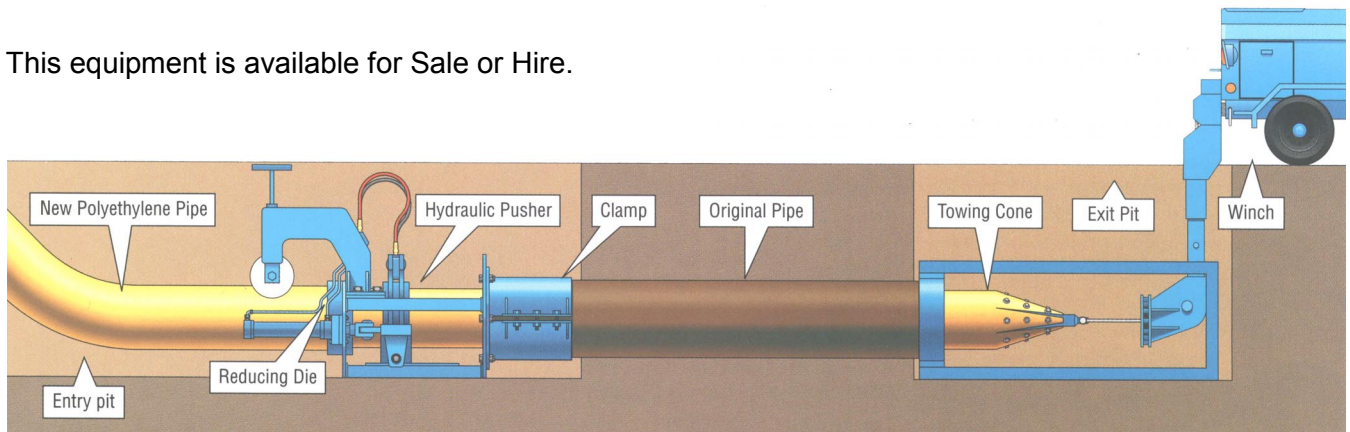

This PE pipe is pulled through a reduction die to temporarily reduce its diameter thereby allowing it to be pulled into the original pipeline. When the pulling load is removed the pipe returns to its original diameter until it becomes a tight fit against the inside of the host pipe. It is suitable for Gas, Water and Sewer pipelines from 3" (75mm) to 48" (1200mm).

Pipe Equipment Specialists are licensed by Swagelining Ltd to manufacture equipment for the Swagelining process. This equipment consists of:

- Swagelining Rigs
- Swagelining Dies
- Power Packs
- Winches
- Gauging Pigs
- Pipe Cleaning Pigs
- Towing Heads
- Pipe Expanders

Each Swagelining Rig is designed to be used with a number of pipe sizes, please contact us for further details.

This equipment is available for Sale or Hire.

Further details on our Pipe Cleaning Pigs and Pipe Expanders can be found on our literature sheets on these products, or on our web site (www.pipe-equipment.co.uk).

For further information on the Swagelining process contact: Dave Whittle at Swagelining Ltd
