

SOLID PROVING PIG

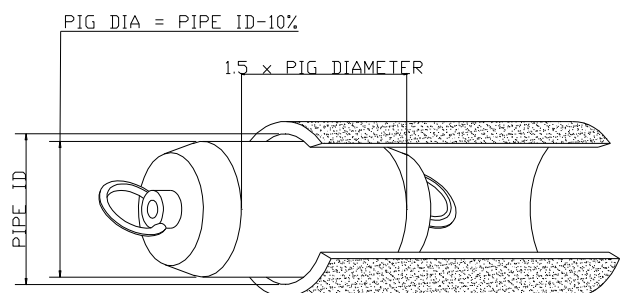

The Pipe Equipment Specialists Solid Proving Pig is used to prove that the internal dimensions of a pipe or duct, do not fall below a minimum diameter, and that the pipe/duct has a circular profile. The Solid Proving Pig is simply pulled through the pipe/duct.

The Solid Proving Pig is supplied with a towing eye at both ends so that a rope may be pulled in at the same time to allow the pig to be retracted, if necessary, or to act as a cable draw cord.

Each Solid Proving Pig is designed and manufactured to meet the customers exact specifications, and the pigs can be supplied in a range of different materials including Nylon, PE, Aluminium, Steel and Stainless Steels (to resist corrosion due to chemical attack).

Typically the pigs are supplied to a diameter 10% less than the internal diameter of the pipe to be proved and are manufactured to a length measuring 1.5 times the pig diameter.

MAJOR FEATURES

- Simple and quick to use
- Extremely robust
- Saves time checking pipe dimensions manually
- Fully Re-usable
- Manufactured to customer requirements
- Available in a range of materials including Nylon, PE, Aluminium, Steel and Stainless Steels

The company follow a policy of continuous product development and as such reserves the right to make alterations to equipment and techniques without prior notice.
